

Design For Impact: A collaborative scaffold for maximizing and communicating impact.

Project: _____

Collaborators: _____

Engagement Period: _____ Version: _____

Vision _____ Q_1

Impact _____ Q_1

Partnership _____ Q_1

Analysis Pathway _____ Q_2

Narrative _____ Q_3

Design For Impact: A collaborative scaffold for maximizing and communicating impact.

Project: _____

Collaborators: _____

Engagement Period: _____ Version: _____

Vision _____ Q₁

Capture: The long-term goal this collaboration will help advance for the organization or team.

Consider: If this work was exceptionally successful, what contribution will you have made to society or to the bottom line? What purpose, cause, or belief motivates this project? What long-term outcome will serve as our guiding light?

Impact _____ Q₁

Capture: The people this work will serve and the decisions or actions the evidence will enable.

Consider: Who will be affected by this work other than the collaborators? How will stakeholders use the evidence we provide?

Partnership _____ Q₁

Capture: The expectations and motivations each collaborator will bring to a successful working relationship.

Consider: What does each collaborator hope to gain and contribute? What are the expectations for scope, timeline, or compensation?

Analysis Pathway _____ Q₂

Capture: A shared plan for gathering evidence that will enable the intended impact.

Consider: What do the stakeholders seek to understand, compare, explain, or predict? Which study design, dataset, model, or visualization would best meet those needs?

Iterate: If the pathway needs to change, record what was learned in Narrative and begin a new version.

Narrative _____ Q₃

Capture: The concise, evidence-based story of how the analysis contributed to the vision, impact, or partnership.

Consider: What is the key takeaway of the analysis? Who are your intended audiences and how will the Narrative be tailored to them? How do the findings enable a decision or action? Who are the direct and indirect stakeholders?
